

Good morning Ms Lee, how can I help you today?

早上好李女士，我今天可以怎么帮您吗？

医生您好 我今天带了我的大女儿来看您 她最近一直咳嗽 不停的那种 而且鼻子不通气 打喷嚏 还有点发低烧 我的女儿到底是怎么了

Hello doctor, I brought my eldest daughter to see you today. She has been coughing for a long time, and can't breathe with nose, and also have a low-grade fever. What happened to my daughter?

Well, based on what you have just described, I'm afraid that your daughter may be at the early stage of whooping cough. The symptom could be developed further if it not treated.

根据你刚才描述的内容，恐怕你的女儿处于百日咳的早期阶段。如果不治疗，症状会进一步发展。

真的 这听起来太可怕了 那患上这种病 是不是很严重呢 我女儿是怎么患上这种病的呢 最近她们学校感冒的人特别多 和这个有没有关系呢

Really? This sounds terrible. Is it serious if suffer from this disease? How did my daughter develop this disease? Recently, there are many people who have a cold in their school. Is this relevant?

Whooping cough is a serious infection that causes a long coughing illness in babies it can lead to apnea and brain damage and it can be life threatening, all the childrens life is not risk but they can spread this illness to other including babies

百日咳是一种严重的传染感染，导致婴儿长期咳嗽，造成窒息和脑损伤，甚至会危及生命，所有儿童的生命都没有风险，但他们可以将这种疾病传播给其他人，包括婴儿

我家里还有一个小宝宝呢 是不是说 我的小宝宝也被传染上百日咳了呢 但是我的小宝宝没有咳嗽的症状 所以我今天就没有待她来

I have a little baby at home. Does it mean that my little baby is also infected with whooping cough? But my little baby has no symptoms of coughing, so I didn't bring her today.

Yes you are right. Whooping cough is highly infectious in the first 3 weeks. it spread easily through family children case in schools so it is likely that your baby boy has already been infected. some newborn babies do not cough at all, instead they turn blue so it is important that you bring your baby boy here for a check 你是对的。百日咳在前3周内具有高度传染性。它很容易在学校和家庭中传播，因此您的儿子可能已经被感染了。有些新生婴儿根本不会咳嗽，而是变成蓝色，所以你带宝宝在这里检查是很重要的

百日咳是怎么传染的呢 那我怎么帮助我的孩子防止患上百日咳 我的小儿儿子两个月 四个月 和六个月的时候就打过疫苗 这也没有有什么用吗

How is whooping cough infected? How can I protect my children from whooping cough? My little son has been vaccinated in his two months, four months and six months. Is this useless?

Whooping cough is spread when the infected person coughs and the bacteria cough into the air that can be held in by babies, children, or adults nearby. These people are in danger of getting whooping cough. Just keeping in mind that even immunised children can sometimes catching whooping cough

当受感染的人咳嗽，细菌就会被咳嗽到空气中，附近的婴儿，儿童或成人都有可能吸入，这些人就有患百日咳的危险。请记住，即使是免疫接种的儿童，有时也会感染百日咳。

那我知道了 但是你还没有告诉我 我都需要做什么去保护我的孩子 有什么药物治疗的方法吗

Then I know, but you haven't told me what I need to do to protect my child. Is there any medication?

If the whooping cough is detected early enough, like in your daughter's case a course of antibiotic can be prescribed, which I'm going to do in a second. After 5 days of treatments, enough bacteria would be killed to stop to breathe to others the best way to protect your children would be keeping them away from the infected

如果像你女儿的情况一样早期检查出百日咳，可以开一个疗程的抗生素，我马上就给你开。经过5天的治疗后，会有足够的细菌被杀死以停止向他人传播，保护孩子的最佳方法是让他们远离感染者

我知道了 医生 谢谢 我明天就带小宝宝来见你

I know, thank you, I will bring my little baby to see you tomorrow.
