Iteration

>>> df.iteritems() (Column-index, Series) pairs
>>> df.iterrows() (Row-index, Series) pairs

Advanced Indexing

Selecting
>>> df3.loc[:,(df3>1).any()]
>>> df3.loc[:,(df3>1).all()]
>>> df3.loc[:,df3.isnull().any()]
>>> df3.loc[:,df3.notnull().all()]

Indexing With isin
>>> df[(df.Country.isin(df2.Type))]
>>> df3 filter(items="a" "b"))

>>> df3.filter(items="a","b"])
>>> df.select(lambda x: not x%5)
Where

>>> s.where(s > 0)

Query

>>> df6.query('second > first')

Backward Filling

Setting/Resetting Index

>>> df4 = df.reset_index()	Set the index Reset the index Rename DataFrame
----------------------------	--

Reindexing

>>> s2 = s.reindex(['a','c','d','e','b'])

Forward Filling

>>>	df.reind	ex(range(4)		>>>	s3 =	s.reindex(range(5),

MultiIndexing

Duplicate Data

>>>	s3.unique()	Return unique values
>>>	df2.duplicated('Type')	Check duplicates
>>>	<pre>df2.drop_duplicates('Type', keep='last')</pre>	Drop duplicates
>>>	df.index.duplicated()	Check index duplicates
	>>> >>>	>>> s3.unique() >>> df2.duplicated('Type') >>> df2.drop_duplicates('Type', keep='last') >>> df.index.duplicated()

Grouping Data

Transformation

>>> customSum = lambda x: (x+x%2)
>>> df4.groupby(level=0).transform(customSum)

Missing Data

>	>> df.dropna()	Drop NaN values
>	>> df3.fillna(df3.mean())	Fill NaN values with a predetermined value
>	>>> df2.replace("a", "f")	Replace values with others

Combining Data

do	ita1	data2

a	11.432	a	20.784	
b	1.303	b	NaN	
с	99.906	d	20.784	

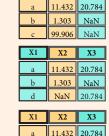

Merge

>>> pd.merge(data1,
