COMP9321- Assignment 3 Marking Guide (S2, 2018)

Group Name:	Examiner:		
Preparation for the Demo		Y	N
• Is everything setup: service running, client apps ready to go? – You should also download the code from the submitted repository and have it ready for inspection • Is there a demo scenario (e.g., some test data, usage scenario, etc.)			

API design and implementation + Client application implementation Note: You will be asked to explain how things are designed and implemented	A	B	C

- (13 Marks) API design?
  o Well-designed URL patterns, appropriate use of HTTP verbs, responses
  o Is it clear what 'added values' do they provide to users?
  o Well-designed endpoints (intuitively) to show the added value for the client app
  o Is it implementing authentication properly?
  o Is it fulfilling the scenarios determined in the first meeting? If not, the group should justify the reason for the changes (no penalty for reasonable changes)
  o Is the Analytics & Machine Learning part is well designed and working properly?
 	
- (6 Marks) The design and implementation of the client
  o Can the application effectively demonstrate the added value/insight or benefit of combining the chosen data sources and the rest API? It is not expected to do very fancy designs; just show how a client can use the service; you can consider it as a simple demo for selling your service.
  o The RESTful server and client are not tied together (they should be completely separate projects- the client can only invoke the rest APIs)			

Group Work, Overall Quality of the Project Outcomes (10)	A	B	C
(3 Marks) Evidence of work and collaboration (2 Marks) Overall quality of the final product
