Tut-Lab Week 8

Aims:

- Understand the organization of an agile team

- Understand the nature of agile planning and estimation

- Start planning for the team-based project

Preparation:

- Review the material on agile software processes

Agile Software Processes

- Under guidance from your tutor/demonstrator, begin to develop an agile plan for the team-based project

- Your objectives should be to:

    - Develop an initial *shared* understanding of the project

    - Decide who will take on the various Scrum roles in the project

    - Agree on regular times for daily standups and sprint reviews

    - Begin to consider some of the epics, user stories and tasks that constitute the project

    - Think about the resources required to undertake the project (including any gaps in your knowledge)

    - Set up your Trello task board and git repository
